## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17, 21, drawn to a method of manufacturing a hollow door, classified in class 156, subclass 242.
  - II. Claims ~~18-20~~, drawn to a hollow core door, classified in class 52, subclass 784.1.
  - III. Claim 22, drawn to a press for molding door skins, classified in class 100, subclass 264.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by a materially different process <sup>such as</sup> placing a flat wood composite blank between platens of a heated press and curing the resin in the blank.

3. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP §

806.05(e)). In this case the process as claimed does not require both the platens to be heated, a plurality of vents, or an actuation for moving at least one of the platens.

4. Inventions II and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the apparatus as claimed can be used for pressing a variety of different products and the product as claimed does not require pressing in a press with a plurality of vents, both heated platens or an actuation for moving at least one of the platens.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
